Basel II Pillar 3 Disclosures for the year ended 31 March 2011 (Continued)

Background

The disclosures and analysis provided herein below are in respect of the Mumbai branch ('the Bank') of UBS AG which is incorporated in Switzerland with limited liability. Also, the disclosures herein below are solely in the context of local regulatory requirements and guidelines prescribed by the Reserve Bank of India (RBI) under Pillar 3-Market Discipline of the New Capital Adequacy Framework (commonly referred to as Basel II). The Pillar 3 disclosures are designed to complement the minimum capital requirements in Pillar1 and the Supervisory Review and Evaluation Process in Pillar 2. The aim of Pillar 3 is to promote market discipline by allowing market participants access to information of risk exposures and risk management policies and process adopted by the bank.

UBS AG is the parent bank within the UBS Group ('the Group'). UBS Group is an international financial services group providing a broad range of financial services including advisory services, underwriting, financing, market making, asset management and brokerage on a global level, and retail banking in Switzerland.

As the bank is a branch operation of UBS AG (incorporated in Switzerland with limited liability), it operates in line with UBS Group principles and policies on risk management which are aligned to local regulations wherever required. For comprehensive disclosures and details of the UBS Group's Risk Management and Control Framework, please refer to the section 'Risk and Treasury Management' of the UBS Group's annual report section available in the Investor Relations section on the Group website www.ubs.com.

Scope of application

The Basel II framework applies to the Mumbai branch of UBS AG which is incorporated in Switzerland with limited liability. The Mumbai branch has no subsidiaries, including those directly owned/controlled by its Parent, which are subject to consolidation requirements under the generally accepted accounting principles (GAAP) or under the capital adequacy framework.

Capital structure

The capital structure of the Bank mainly comprises of interest free funds provided by its Head Office in the form of Tier 1 capital.

(Rs. 000s)

Composition of capital	As at 31 March 2011	As at 31 March 2010
Tier 1 Capital Head Office capital	19,102,404	14,582,404
Statutory Reserve Balance in P&L	147,422	2,623
	19,249,826	14,588,027
Deductions: Debit balance in Profit and Loss Account Amount receivable from Head Office (Other than Nostro Balances)	-	(189,513) (25,382)
Deferred Tax Asset Total Tier 1 Capital	(106,484) 19,143,342	(41,271) 14,328,861
Tier 2 Capital General Provisions Investment Reserve	36,448 10.432	2,588
sssiic neselve	46,880	2588
Total éligible capital base (Tier 1 + Tier 2)	19,190,222	14,331,449

Basel II Pillar 3 Disclosures for the year ended 31 March 2011 (Continued)

Capital adequacy

Sufficient capital must be in place to support business activities, according to both the bank's own internal assessment and the requirements of its regulators. Ensuring compliance with minimum regulatory capital requirements and targeted capital ratios is central to capital adequacy management.

The Bank aims to maintain sound and optimum capital ratios at all times, and it therefore considers not only the current situation but also projected developments in both its capital base and capital requirements. Currently the main source of the Bank's supply side of its capital is capital infusion by its Head Office.

The capital management process involves:

- (a) monitoring the regulatory capital and ensuring that minimum regulatory requirements and internal targets are met;
- (b) estimating the capital requirements based on forecast and strategic plan; and
- (c) reporting the regulatory capital situation to senior management on a regular basis.

Local Finance function is responsible for co-ordinating the above process. The Bank has developed and documented a suitable Internal Capital Adequacy Assessment Process (ICAAP).

The Bank's minimum capital requirements and capital ratios are follows.

(Rs. 000s)

Particulars	As at 31 March 2011	As at 31 March 2010
Capital requirements for credit risk Portfolios subject to standardized approach Securitization exposures	1,113,237 1,113,237	186,246 186,246
Capital requirements for market risk Standardized duration approach	757,828	579,931
Interest rate riskForeign exchange risk (including Gold)Equity risk	712,828 45,000	534,931 45,000
Capital requirements for operational risk Basic indicator approach	47,796 47,796	50,891 50,891
Total Capital ratio Tier 1 Capital ratio	90.01% 89.79%	157.86% 157.83%

As per Basel II requirements, the minimum capital to be maintained by the banks during initial periods has been subject to the prudential floors of 100%, 90% and 80% of the capital requirement under Basel I over the years ended 31 March 2008, 2009 and 2010 respectively. RBI vide circular (DBOD. BP.BC.No.71/21.06.001 / 2010-11) dated December 31, 2010 has advised banks to continue with prudential floor of 80% until 31 March 2013.

Basel II Pillar 3 Disclosures for the year ended 31 March 2011 (Continued)

Risk Management and Control Framework Overview

Risk management and control principles

There are 'five' key principles that underpin the Bank's risk management and control framework.

- Protection of financial strength
- Reputation protection
- Business management is accountable for all risks
- Independent control of risk
- Disclosure of risk

Risk management and control responsibilities

Key roles and responsibilities related to risk management and control are outlined below:

- The Branch Management and Risk Committee (MRC) has a strategic and supervisory function and is responsible for determining the Bank's fundamental approach to risk. The Committee is headed by Country Chief Executive Officer and its composition includes heads of business, logistic and control functions in India.
- The MRC is supported by the following key committees responsible for the implementation of risk management and control principles.
 - The Risk Control Sub-Committee which is responsible for the three major risk types viz. Credit, Market and Operational Risks.
 - The Asset Liability Sub-Committee (ALCO) with a responsibility for balance sheet management, liquidity and capital management, interest rate risk management.
- The head of each business division is accountable for the results and risks of his or her division as well as maintaining an appropriate risk management structure.
- The Branch Risk Officer and the Chief Operating Officer are responsible for the development and implementation of appropriate control frameworks for credit, market and operational risks with support from the business divisions.
- The Head of Finance and the Chief Operating Officer are responsible for ensuring that the Bank and its business divisions disclose their financial performance in a clear and transparent way, and that this reporting and disclosure meets all regulatory requirements and corporate governance standards. They are also responsible for the implementation of UBS Group's risk management and control frameworks in the areas of capital management, liquidity, funding and tax.

Basel II Pillar 3 Disclosures for the year ended 31 March 2011 (Continued)

Risk management and control framework

The Bank's risk management and control principles are implemented via a detailed risk management and control framework. The framework comprises both qualitative elements such as policies and authorities, and quantitative components including limits. With the risk management and controls principles as its basis, the framework is continually adapted and enhanced as the Bank's businesses and the market environment evolve.

There are five key components in the independent risk control framework:

- Risk policies and authorities
- Risk identification
- Risk measurement
- Risk control
- Risk reporting

Credit Risk

Credit risk is the risk of loss resulting from the failure of a client or counterparty to meet its contractual obligations to the Bank

Credit risk is inherent in traditional banking products such as loans, commitments to lend and contingent liabilities (for example, letters of credit) as well as in "traded products": derivative contracts such as forwards, swaps and options; repurchase agreements (repos and reverse repos); and securities borrowing and lending transactions. The risk control processes applied to these products are fundamentally the same, although the accounting treatment varies, as they can be carried at amortized cost or fair value, depending on the type of instrument and, in some cases, the nature of the exposure.

Credit risk is controlled and monitored by establishing appropriate limits and operational controls to constrain credit exposure to individual counterparties and counterparty groups. There are specific policies and procedures applicable to different business segments.

The Bank uses its Group developed tools to support the quantification of the credit risk of individual counterparties for internal measurement and management, applying the three generally accepted parameters: probability of default, exposure at default and loss given default.

Credit risk regulatory capital requirements are computed based on the standardized approach prescribed by RBI.

Basel II Pillar 3 Disclosures for the year ended 31 March 2011 (Continued)

Credit risk: Disclosures for portfolios subject to standardised approach

The Bank uses credit ratings of the external rating agencies prescribed by RBI in the new capital adequacy framework. Eligible rating agencies and the relevant type of exposures where those ratings can be used are as follows:

Exposure/obligor category	Rating agency type	Rating	agency names
Foreign sovereigns, Foreign Banks	International	•	Standard & Poors
(excluding their Indian branches) and Non resident corporates		•	Moody's
		•	Fitch International
Resident corporates, securitization	Domestic	•	CRISIL Limited
		•	CARE
		•	Fitch (India)
		•	ICRA Limited

The Bank adopts the RBI guidelines in transferring public issue ratings to comparable assets in the banking book. The key norms prescribed in this regard require one notch higher risk weight than the rated exposures for short term claims; unrated claims should be senior or at least pari passu with rated claims; matching of currency of the unrated claims with the rated claims.

(Rs. 000s)

Risk bucketwise analysis of bank's	As at	As at
outstanding exposures (fund based and non fund based)*	31 March 2011	31 March 2010
Below 100% risk weight	37,729,930	7,311,662
100% risk weight	4,629,295	-
More than 100% risk weight	-	-
Deducted from capital	-	25,382
Total	42,359,225	7,337,044

^{*}Excluding investments subject to specific market risk, fixed assets and other assets.

Credit risk mitigation

A key aspect of credit risk mitigation is proper identification of key risks and imposing appropriate credit conditions. While assessing credit facility for a counterparty, the Bank carries out a detailed appraisal exercise which covers areas such as Company's business, industry characteristics, peer analysis, financial analysis, identifying of key risks and risk mitigants. Financial analysis covers analysis of various financial ratios (e.g. leverage, interest cover, etc.) and these in turn are used to arrive at the risk rating of the counterparty and the credit appetite.

Key credit controls include approving credit facilities in line with Company's credit profile, taking appropriate collateral, etc. Further the Bank tracks the credit profile of the Company on an ongoing basis and tracks early

Basel II Pillar 3 Disclosures for the year ended 31 March 2011 (Continued)

warning signal to assess any deterioration in credit profile/ assessment of exposure. Credit facilities to a counterparty are subject to annual review with limited review of financial performance/ industry update on a half yearly basis.

The OTC derivatives business is generally conducted under bilateral master agreements, which typically allow for the close-out and netting of all transactions in the event of default.

Securitisation

The bank has not undertaken any securitization deals during the reporting period.

Market risk in Trading Book

Market risk is the risk of loss from changes in market variables. There are two broad categories of changes: general market risk factors and idiosyncratic components. General market risk factors are driven by macroeconomic, geopolitical and other market-wide considerations, independent of any instrument or single issuer or counterparty. They include such things as interest rates, the levels of equity market indices, exchange rates, commodity prices (including the price of energy and metals), as well as general credit spreads. The associated volatility of these risk factors and the correlations between them are also considered to be general market risk factors. Idiosyncratic components, on the other hand, are those that cannot be explained by general market moves. Broadly they are the elements of the prices of debt and equity instruments, as well as derivatives linked to them, which result from factors and events specific to individual companies or entities.

Trading businesses are subject to multiple market risk limits. Traders are required to manage their risks within these limits which in turn may involve employing hedging and risk mitigation strategies. These strategies can expose the Bank to risk as the hedge instrument and the position being hedged may not always move in parallel (often referred to as "basis risk"). Senior management and risk controllers may also give instructions for risk to be reduced, even when limits are not exceeded, if particular positions or the general levels of exposure are considered inappropriate.

The Bank has two major portfolio measures of market risk – Value-at-Risk (VaR) and stress loss for internal management purposes. They are complemented by concentration and other supplementary limits on portfolios, sub-portfolios, asset classes or products for specific purposes where standard limits are not considered to provide comprehensive control.

Market risk regulatory capital requirements are computed based on the standardized approach prescribed by RBI.

Value at Risk (VaR)

VaR is a statistical measure of market risk, representing the market risk losses that potentially could be realized over set time horizon at an established level of confidence. The Bank's Group VaR model is used for internal management purposes only.

The key features of the bank's Group-wide VaR model framework used for internal management purposes are:

- ❖ VaR model makes use of five years of historical data and is calibrated to a 1-day 95% measure. Until September 2009, it was computed using a 10-day 99% measure.
- ❖ VaR is calculated daily, based on end-of-day positions, and by applying the historical changes in market risk factors directly to current positions- a method known as historical simulation.

Basel II Pillar 3 Disclosures for the year ended 31 March 2011 (Continued)

Realized market losses can differ from those implied by the VaR measure for many reasons. All VaR measures are subject to limitations and must be interpreted accordingly.

Value-at-Risk (Based on 1-day, 95% confidence level)

(Rs.000s)

	Year ended 31 Mar 2011		
	Min	Max	Average
Interest rate & Fx risk	26,850	142,894	63,299

(Rs.000s)

	Year ended 31 Mar 2010		
	Min Max Average		
Interest rate & Fx risk	979	59,433	22,358

Stress loss

As a complement to VaR, macro stress scenarios combining various market moves to reflect the most common types of potential stress events, and more targeted stress tests for concentrated exposures and vulnerable portfolios. During the year, stress testing framework was enhanced which included updating stress scenarios to more accurately capture the liquidity characteristics of different markets and implementing stress scenarios to reflect market conditions that were experienced at the height of the financial crisis in fourth quarter of 2008.

Quantitative disclosures

(Rs. 000s)

	As at 31 March 2011	As at 31 March 2010
Capital requirements for market risk	757,828	579,931
Standardized duration approach		
 Interest rate risk 	712,828	534,931
 Foreign exchange risk (including Gold) 	45,000	45,000
Equity risk	-	-

Interest rate risk in the banking book (IRRBB)

The interest rate risk in banking book (IRRBB), as of now is not material and currently monitored based on monthly interest rate sensitivity analysis report by bucketing the exposures into re-pricing buckets. The increase/decrease in earnings due to a downward/upward shock of 200 basis points in the rupee banking book is Rs. 2,499 (000s).

Operational risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems (for example failed IT systems, or fraud perpetrated by a UBS employee), or from external causes, whether deliberate, accidental or natural. Operational risks are monitored and, to the extent possible, controlled and mitigated to levels considered acceptable by senior management.

Basel II Pillar 3 Disclosures for the year ended 31 March 2011 (Continued)

All functions, whether business, control or logistics functions, must manage the operational risks that arise from their activities. Operational risks are pervasive, as a failure in one area may have a potential impact on several other areas. The Bank has therefore established a cross-functional body to actively manage operational risk as part of its governance structure.

The foundation of the operational risk framework is that all functions have adequately defined their roles and responsibilities. The functions can then collectively ensure that there is adequate segregation of duties, complete coverage of risks and clear accountability.

The functions use their controls to monitor compliance and assess their operating effectiveness in several ways, including self-certification by staff, tracking of a wide range of metrics (for example, the number and characteristics of client complaints, deal cancellations and corrections, unreconciled items on cash and customer accounts, and systems failures), and the analysis of internal and external audit findings.

For local regulatory capital measurement purposes, the Bank follows the Basic Indicator Approach.
